1. Department: «Nursing-1»

2. Level of preparation: «Applied Bachelor of Nursing»

3. Specialty: 009130100 – «Nursing»

4. Course: 3(3 years 6 month)

5. Name of elective discipline: «Nursing basics»

6. Amount of credits: 1

7. Objectives: Formation of theoretical knowledge and practical skills among students, accumulation of the first practical experience in the specialty. Analysis of the principles of professional ethics and deontology, nursing manipulations. Consolidation of knowledge on sanitary and epidemiological measures in medical organizations. Understanding of the BI, the infection process and infection control, training in the prevention of VBI. Tell us about the structure and functions of the admission department. To teach to monitor the functional state of the patient.

8. Purpose of the discipline:

- The philosophy of nursing. Deep, systematic education on the basics of medical ethics and deontology;
- The main types, structure and organization of work of medical organizations;
- To teach the basics of the sanitary and epidemiological order, types, methods and use of funds in medical organizations; The concept of VBI, the infectious process. Training in infection control, prevention of VBI;
- Training in the principles of the device and the basic services of the admission department.
- Training in the control of the functional state of the patient.

9. The content of the discipline: The philosophy of nursing. Fundamentals of medical ethics and deontology. The main types, structure and organization of work of medical organizations. Sanitary and epidemiological order, types, methods, and means in medical organizations. The concept of VBI, an infectious process. Infection control, prevention of VBI. The structure and main activity of the admissions department. Anthropometry, maintenance of medical records. The method of measuring pulse and blood pressure. CT, a technique for measuring body temperature and monitoring diuresis.

10. The rationale for choosing a discipline: Fundamentals of nursing is a discipline that for the first time introduces students to practical healthcare, the organization of work of medical institutions, and teaches methods of observation and patient care.

11. Learning outcomes (competencies):

Knowledge (cognitive sphere)	Skills (psychomotor sphere)	Personal and professional competences (relations)
The philosophy of nursing. Fundamentals of medical ethics and deontology.	He knows the history of nursing. Knows the ethics of the medical staff. He is able to work with colleagues and employees of a medical organization.	Be prepared for the peculiarities of medical etiquette and relationships.
The main types, structure and organization of work of medical organizations.	He knows and is able to distinguish between the main types of medical organizations: outpatient and inpatient standard institutions, their activities.	The ability of medical organizations to provide any service in carrying out their work
Sanitary and epidemiological order, types, methods, means in medical organizations, the concept of VBI, the infectious process. Infection control, prevention of VBI.	The sanitary and epidemiological procedure in the EPU can carry out a set of measures: placement of hospital premises, waste collection and compliance with sanitary rules according to norms and rules, disinfection in the source of infection, disinfection of medical equipment, strict compliance and control of compliance with the requirements of asepsis and antiseptics;	Be responsible for the sanitary and epidemiological order, prevention and control of nosocomial infections in medical organizations.
The structure and main activity of the admissions department. Anthropometry, maintenance of medical records.	He can organize and carry out maintenance of the types, location and structure of the admission department, carry out anthropometric measurements of incoming patients and work with documents.	Working with medical documents at a high level
Monitoring of the patient's functional state: a method for measuring pulse and blood pressure. CT, a technique for measuring body temperature and monitoring diuresis	He is able to control the functional situation and can perform actions according to the algorithm. It can perform body temperature and its measurement, arterial pulse, its properties and measurement, blood pressure measurement.	Compliance with modern requirements in the examination of the functional state of the patient

12. Prerequisites: «Health promotion», «Patient education».

13. Post requisites: «Improved functionality». «Specialized nursing care»
